LG&E Lighting FAQ

1. Can I keep my non-LED light?

LG&E will not replace the existing lighting fixture until it fails and cannot be fixed by simply replacing the bulb and photo control.

Once the fixture fails, LG&E will replace the existing light with a comparable LED fixture. You will pay the monthly rate associated with the new installed LED. No conversion fee is applicable in this situation.

2. Is there a cost to convert my non-LED light to a LED light now?

Yes. There is a monthly conversion fee that is assessed for 60 months, or you can pay a one-time fee of \$260.00 per fixture.

- The LG&E monthly conversion fee is \$4.62

3. Why do I have to pay a conversion fee to switch to an LED light?

When LG&E installs a new lighting fixture there is little to no upfront cost to the customer. That is because LG&E uses the monthly rate to recover the cost of owning and maintaining that light over time. When a light in good working order is removed from service, LG&E still has to pay the cost of owning that fixture until it would have reached the end of its useful life (when it failed).

The conversion fee pays for the cost of removing that light before it would have failed. Instead of assessing customers a large one-time fee to recover the remaining value of the working light, in an attempt to encourage LED adoption, LG&E has proposed to recover those costs over 60 months

4. I have been paying for my light for many years, why do I have to pay the same monthly conversion fee as everyone else?

Even though you have been paying for a light at a particular location for many years, it is likely that is not the original light fixture installed when you signed up for service. Whenever a light fixture fails, LG&E replaces that fixture, and the monthly rate recovers the cost of the new replacement fixture.

5. Why does the recommended comparable LED have such a lower lumen output than my non-LED fixture?

Non-LED lights use a traditional bulb that throws light in all directions (omnidirectional). Much of the light emitted from the non-LED bulb is lost up into the air or behind the fixture to areas we do not want to light. LEDs distribute light at a sharp, defined angle, shining light only on the areas we want to illuminate, greatly cutting down on lumen loss. Because of the way LEDs emit light, this also helps reduce light trespass issues such as when a light inadvertently shines on a nearby home.
